Letter to the Select Board Re: Goddard Biomass Plant

The town of Plainfield Water and Waste Water Commission accepts Greg Chamberlain's letter of December 15, 2011 stating that "we are in support of the system."

It is understood that the support is based upon the information regarding the chemicals and discharge contemplated in the statements made by Goddard, Artichoke Design, and the State of Vermont in 2011. The commission does not support any changes in the system design or chemicals.

In completing due diligence in researching the plant the Commission further requires that the shut off valve at the reservoir be operational and accessible at all times into perpetuity.

Goddard shall immediately notify the Water/ Waste Water operator of any spillage.

Goddard shall be responsible to the Water Waste Water system and employees in the event of spillage causing damage.

Goddard shall be responsible for any damage done to the infrastructure of the system due to construction and/or operation of the biomass plant.

Signed:

Jim Jamele

Mary Lane

Karen Starr

Water Waste Water Commission
